

Luxembourg, September 18, 2018

Press release:

Luxembourg Internet Days 2018 – Security that meets your needs!

LU-CIX is pleased to share information about the 5th edition of the Luxembourg Internet Days, the ICT event from the sector for its actors and users. In line with the previous successful editions, the Luxembourg Internet Days will explore, with its inimitable technical and pragmatic approach, two very sensitive topics, extremely relevant to the ICT user's vital security and trust requirements: "Network Security and Monitoring" on November 13 and "Cloud Security" on November 14.

This year, Estonia will be put under the spotlight throughout the event. Estonia has recently made headlines in news outlets by announcing its first ever **Data Embassy**, to be based in Luxembourg. There couldn't be a single project more emblematic and fitting with the two themes chosen for this year's Luxembourg Internet Days! On the first day, Mr. Sikkut, Chief Information Officer of the Estonian government, will be travelling specially to share the nation's views on cybersecurity demand at a state level. The same day, key sector experts such as Kentik, Netscout or Cybexer will unveil the next step for Network Security, panel discussions will create interactive debates around how security strata may have to cluster to keep protecting against evolving threats, and another discussion will treat how to apply the new NIS Directive. CIRCL's experts will give an open workshop to help professionals strengthen knowledge on cybersecurity.

The afternoon will end with the Luxembourg Network Operator Group (LUNOG) launch event, with keynote presentations from RIPE NCC and LINX, followed by a cocktail. The LUNOG initiative aims to be the Community for Network Operators willing to foster free exchanges and its sole purpose is to support people working for ICT in Luxembourg.

The second day will focus on Cloud Security. Trendsetting companies such as AWS will join in to share their vision and discuss the different security level in an Age of Dark Data and Shadow IT. GDPR will also be treated both with an unusual angle during a panel discussion with Microsoft, and during a workshop given by the law firm MNKS to allow attendees to ask any questions and have an open discussion to share experiences and methodologies. Luxembourg House of FinTech (LHoFT) will animate a 2-hour session open to companies of any size from the finance sector to help them sort all IT matters out. The detailed event programme will be available by mid-October.

As always, the 50-booth Expo area will offer visitors a chance to meet with a large number of solution providers and to discover new players. A zone will be dedicated to Estonian companies offering state of the art solutions.

This year, registration is mandatory to access the event; free online registration is already possible and recommended at www.luxembourg-internet-days.com.

About LU-CIX

LU-CIX, the LUxembourg Commercial Internet eXchange was founded in 2009 based on a non-profit membership association with an open and neutral philosophy. Its aim is to develop the Internet and support the data center community in Luxembourg. As well as providing the technical infrastructure, LU-CIX also makes a major contribution to the Luxembourg Internet community through its leading industry event, Luxembourg Internet Days, which takes place in November every year and attracts over a thousand industry experts and decision makers from around the globe. LU-CIX also runs the datacenters-in-europe.com website, which provides a shared communication platform for all the players in the Luxembourg data center and Internet arena and promotes Luxembourg as the best place for your European data center and ICT business in the heart of Europe.
